

The Nesturtains are Common 10/78
(add one ee) (whistleover + one)

In our back yard we've got some plants
They are known as Nesturtains
April the Nesturtains are coming

Nesturtains grow like nasty weeds
and on this coast they get hard needs

Nesturtains got a nice orange flower
Seem to pop up by the hour

Little fall stem Big round leaf
Both are thin both are green

Luckily they're good to eat
Unluckily they're peppery

You could eat one leaf a day
while 20 grow to take its place

Can be used on the compost pile
but who could turn it in a while

Grow in clumps we don't call ours
They seem to move in

4 times a year we cut them down
They're grown back when we turn around

Do not know quite what to do - be glad at least they're not
So now we sit & watch them grow - probably soon they'll be...

where the nasty loose balls
where we found the balls
on 20. they've been taken to tags
